

# Loftus Peak Global Disruption Active ETF

Change. The way you **should** invest.

## Research Ratings:

July 2025

Loftus Peak is a global equities fund manager focused on disruptive businesses. Founded in 2014, the Fund invests in global companies driving industry change, such as Nvidia, first bought in 2016. As well as Microsoft and Broadcom, the diverse portfolio also includes many less well-understood companies which are expected to be household names in the future, such as AMD and Qualcomm. This global approach aims to reduce concentration risk often associated with home-biased Australian portfolios.

**Source:** Loftus Peak, Bloomberg. Past performance is not a reliable indicator of future performance. Returns greater than one-year are annualised. Net-of-fees performance for the Fund is based on end-of-month redemption prices after the deduction of fees and expenses and the reinvestment of all distributions. Investment return and the principal value fluctuate, so your units, when sold, may be worth more or less than the original cost. For further details, please refer to the Fund's Product Disclosure Statement and Target Market Determination.

## Review and Performance

The value of the Fund increased by +3.1% net-of-fees in July, however this was not enough to drive outperformance relative to the MSCI All Countries World Index (net) (as expressed in AUD from Bloomberg), against which the Fund underperformed by -0.5%. During the month, the macro-outlook improved with several "trade deals" being notionally struck between the US and trade partners. This combined with broadly strong earnings lifted markets.

## Contributors and Detractors to Return

For July, the Artificial Intelligence (AI) trade performed strongly as the hyperscalers reported quarterly earnings. Companies like **Meta** (+0.4% contribution to Fund returns) and **Microsoft** (+0.4%) saw strong growth in their core businesses underpinned by AI integration. Meta CEO Mark Zuckerberg said the company had "expanded the new AI-powered recommendation model for ads and improved its performance by using more signals and a longer context." (This) has driven roughly 5% more ad conversions on Instagram and 3% on Facebook." The company reported a +22% increase in revenue year-over-year to US\$47b for the most recent quarter.

Meanwhile Microsoft's Azure Cloud reaccelerated to +39% revenue growth year-over-year, driven by AI deployments on the cloud. These companies are also offloading internal work like coding onto AI models providing a compelling incentive for further AI capital expenditure (CapEx). Across Meta, Microsoft, **Amazon** (+0.4%), Alphabet, Apple, Oracle, CoreWeave (the latter four are not current holdings) and the tier 2 cloud players, AI is powering estimates for year-over-year cloud CapEx growth to accelerate above 70%. This is despite aggregate CapEx across these companies already being at its highest ever level in 2024.

This has provided further impetus for gains in the vendors of that CapEx; the semiconductor stocks. **Nvidia** contributed +1.1% to the Fund and was the strongest performer for the second month in a row while **Taiwan Semiconductor Manufacturing Company** was also solid (+0.8%). **Arista** and **Broadcom** contributed a combined +0.8%. Despite the strength to date, incremental demand is still emerging beyond 2025. We believe that the full breadth of cloud providers and sovereign AI data centres is yet to be priced.

Nevertheless, we are conscious that markets have run up strongly since the April lows. We are keen to maintain defensive exposure to companies outside AI which we believe are still relatively macro agnostic. We recently added Contemporary Amperex Technology Co Ltd (CATL) the world's leading manufacturer of lithium-ion batteries for electric vehicles and energy storage systems, and it performed well, adding +0.6%. Partially offsetting this was a -0.6% decrement to fund value from **Netflix**, which sold off on results having already increased almost tenfold in price in the ten years it has been held.

What has been clear since 2020 is that Netflix has an (almost) unassailable lead relative to competitor streamers or indeed the linear cable channels which it has overtaken. The problem for Disney, Paramount and the thousands of other competitors is that without enough subscribers it is impossible to spend the US\$5b-US\$10b on annual programming needed to win enough subscribers. Speaking of streamers, we continue to hold **Roku**, a free advertising supported TV offering which in its earnings release announced a buy-back of stock for the first time.

**Qualcomm** and **Palo Alto Networks** combined cut -0.6% from fund value for the month. Despite strong valuation support and strong execution on the secular expansion into automotives, PC and even data centre, the market is still focused on the loss of Qualcomm's Apple revenue. Palo Alto irked investors after announcing its intention to acquire CyberArk. A half dozen other companies were responsible for a -1.1% reduction.

The Australian dollar depreciated -1.8% against the US dollar over the month, increasing the value of the Fund's US-dollar denominated positions. As at 31 July 2025, the Fund carried a foreign currency exposure of 97.2%.
